

Full-Stack PHP Developer (Short Resume)

Full Name: Batrakov Volodymyr

Location: Zhytomyr, Ukraine (Strictly Remote)

Email: xxtarantulzz@gmail.com

Telegram: @xtarantulz

LinkedIn: <https://www.linkedin.com/in/xtarantulz/>

Employment type: Full-time, Remote

Desired Position: Senior Full-Stack Web Engineer / Architect (PHP, Yii2, Laravel, Node.js)

Objective:

To obtain the opportunity to develop my talents as a web developer and application developer, as well as to use a creative approach in creating video and music. I am looking for a team that values innovation and openness to new ideas, where I can continuously grow and improve my skills in a professional environment.

Languages:

- Ukrainian - fluent
- English - Intermediate (B1): technical documentation, work communication, APIs and development workflow
- Russian - fluent

Education:

- Master's Degree in Informatics and Applied Mathematics, Zhytomyr Ivan Franko State University.
- Additionally, I completed a 6-month corporate English course at an IT company to improve technical and professional communication in English.

Experience:

1. Fullstack PHP (CMS) Developer at Origami design studio from 02.2011 to 02.2016 (<http://origami.ua/>)
2. Fullstack Web Developer at Grapps from 04.2016 to 11.2017 (<https://grapps.io/>)
3. Fullstack Web Developer at SeoTm from 12.2017 to 12.2019 (<https://www.seotm.com/>)
4. Fullstack Yii2 Developer (remote) at the State GeoCadastre from 01.2020 to 07.2022 (<https://oda.ztmbk.gov.ua>)
5. Fullstack Web Developer at Solid Solutions from 09.2022 to 04.2024 (<https://solid-sl.com/>)
6. Fullstack Web Developer (remote) from 04.2024 (payment systems project) - confidential / not

subject to disclosure

Portfolio and Profiles:

- **GitHub Resume:** <https://xtarantulz.github.io/resume/>
- **Weblancer:** <https://www.weblancer.net/users/xtarantulz/> (some portfolio items were removed due to project age or NDA)
- **LinkedIn:** <https://www.linkedin.com/in/xtarantulz/> (includes "Projects" section)
- **GitHub:** <https://github.com/xtarantulz> (some code, modules, and pet projects are publicly available, including a demo e-commerce project on Yii2 created before using AI: <https://github.com/xtarantulz/shop-yii2>)
- Additionally, there are personal pet projects (real products with practical business logic; some have active users and are used in real scenarios). Details and examples can be provided during the interview.

Short description of work experience over the years:

From February 2011 to February 2016, I worked at a design studio developing websites of varying complexity. I used popular CMS platforms such as Drupal, Joomla, WordPress, and Magento.

Projects: DS Origami, Magnum Hotel, Cofedgio, Prime Group, Irish Pub, Mila Nytych, Fitness Mania, S. Stvardovska, Avtozvuk, Stop Transit, Avesauto, AvdTrade, Ostrovit, Zorrov, My-Print, Marian and Donich.

After that, **from April 2016 to November 2017**, I worked at a company that collaborated with international clients.

1. A project similar to Telegram for Android and iOS users in Europe. I used Yii2 for the admin panel and Node.js (Socket.IO, Firebase) for real-time messaging.
2. A platform for cyclists traveling mountain routes in Italy. I developed the admin panel, a Yii2 web application, and a REST API.
3. A project for Israeli tow truck drivers, similar to a ride-hailing auction service. I built the admin panel, Yii2 web application, and REST API.

From December 2017 to December 2019, I worked at an IT company focused on developing and promoting websites for Ukrainian and international clients.

1. A job search platform for dentists in the UK (similar to rabota.ua). I developed the backend, admin panel, and REST API using Yii2.
2. A fleet management system for minibuses with screen monitoring using Yii2, Node.js, and Android, including remote device control.
3. A coffee shop chain management system built with Yii2 and React Native. I implemented the backend, admin panel, and REST API for managing products, sales, staff, inventory, and suppliers.
4. An Amazon warehouse automation system built with Yii2, including data synchronization with 1C via REST API.

From January 2020 to July 2022, I worked remotely on projects related to Ukrainian cadastral mapping and logistics based on Google Maps. One project focused on land contracts and cadastral data management, while another involved optimizing multi-point routing for efficient delivery operations.

From August 2022 to April 2024, I worked at an IT company on projects in the SEO and analytics

domain, including Google Business Profile, YouTube auditing, and website analytics. I also worked on predicting website and business performance. I was part of a team of eight developers.

From April 2024 to April 2026, I worked as a Fullstack and REST API developer in a payments systems company. My responsibilities included backend/frontend development, REST API integration, payment service integrations, and infrastructure support. Some project and client details are confidential under NDA.
