ABOUT ME

Senior Full-Stack Web Engineer with over **10 years of experience** in developing and designing complex web systems. My primary specialization is **PHP and Yii2**, with hands-on experience in **Laravel** and **Node.js**. I build scalable backend solutions, RESTful APIs, CLI tools, and background processes (CLI / Cron).

Experienced in application architecture design, payment system and third-party service integrations, database optimization, and large-scale data processing. I work with CI/CD, deployment automation, and Linux server administration. I have contributed to government and commercial web projects, including high-load platforms.

I have been using **AI tools (LLMs) for over 3 years** to analyze tasks, debug, refactor and optimize code, generate tests, and accelerate development. English - **B1 (technical)**: documentation, written communication, and discussions of technical tasks.

SKILLS

Backend & Databases

PHP (10+ years) MySQL (10+ years) MariaDB PostgreSQL Node.js Express.js CLI / Console Scripts / Cron MySQL Full-Text Search

Frameworks & Architecture

Yii2 (10+ years) Laravel (2+ years) REST API Design MVC SOLID / DRY / KISS Design Patterns Microservices / Monolith

Frontend

HTML5 / CSS3 (10+ years) JavaScript (10+ years) TypeScript jQuery (10+ years) AJAX (10+ years) Bootstrap (10+ years) SCSS / PostCSS Tailwind CSS React Webpack / Vite WebRTC Socket.IO

Payment Systems & Crypto Payments

LiqPay | PayPal | Stripe | Tranzilla | Payoneer | MIFINITY API | FLEXIFY API | SHEEPY API | PAYADMIT API

DevOps, Infrastructure & Performance

Linux | Windows | Docker / Docker Compose | Nginx / Apache | CI/CD (GitLab CI) | Git | Redis | Memcached | Elasticsearch | Apache Solr | Cloudflare | cPanel / ISPmanager / VestaCP

APIs, Integrations, Testing & AI

OAuth 2.0 | Google APIs (Maps / Drive / Analytics / Sheets / Gmail) | Firebase | Telegram Bot API | Twilio API | SendGrid API | Nova Poshta API | PHPUnit | API Testing | AI-Assisted Development | ChatGPT | Gemini | Codex / JetBrains AI | Claude

Additional Technologies & Tools

Composer | NPM / Yarn | Bower | PhpStorm | Postman | MySQL Workbench / DBeaver | Jira / Redmine | Worksection / Trello / Notion | Adobe Photoshop | WordPress / OpenCart | Drupal / Joomla / Magento

WORK EXPERIENCE

Fullstack Web Developer / Architect

04.2024 – 04.2026 (2 years)

IT Company (iGaming), Company Name Under NDA, Remote

PHP 8.x | Yii2 | Laravel | Node JS | Express.js | MariaDB | JavaScript | AJAX | HTML5 | CSS3 | Bootstrap 5 | Fiat & Crypto APIs

iGaming Platform (B2B SaaS / ERP) — Gaming Operations Management & Analytics Platform

International B2B platform (Back-office / CRM) for monitoring gaming activity, financial analytics, and risk management. Successfully executed a large-scale architecture migration from Yii2 to Laravel 10. Fully implemented the payment gateway module by integrating 9+ payment systems (Fiat & Crypto: PayPal, LiqPay, Stripe, Tranzilla, Payoneer, Sheepy, Flexify, Payadmit, Mifinity). Developed a complex user segmentation builder with dynamic filtering based on flexible boolean logic (AND/OR operators) for custom data selection. Independently designed and implemented all mathematical calculation logic and the financial analytics core from scratch, and created interactive visualization and charts (GGR, Net Revenue, Average Bet, Deposits metrics) on the frontend.

RankExplore — SEO Networks & Link Building Automation Platform

International link building marketplace and ERP/CRM system for automated private blog network (PBN) management and link monitoring. Acting as the direct deputy to the Tech Lead of the company's IT department, co-implemented a deep modernization of the platform's legacy Yii2 code to meet 2026 standards (SEO-friendly URLs, 3 site localizations, FAQ) and launched new commercial article and link sales modules in production. Fully administered the GitLab infrastructure for all company projects: introduced Git version control, configured security (SSH keys), auto-deployment, wrote technical documentation, and coordinated the integration of these standards across other development teams. Integrated Discord debug logging for real-time bug monitoring.

Istok-Avto — B2B/B2C Auto Parts E-commerce Platform

Large-scale online store and B2B portal for selling auto parts. Successfully conducted deep modernization and safe updates of outdated legacy code on the Yii2 framework from PHP 7.4 to PHP 8.2. Fully redesigned the product catalog architecture, main navigation (header), and implemented complete mobile responsiveness. Integrated external specialized automotive APIs (TecDoc)

for precise auto parts selection (body parts, glass, optics, etc.) by vehicle make, model, modification, or VIN code. Developed and implemented a high-performance multi-level product filtering system for large datasets.

Main Responsibilities:

- Designing and fully integrating payment gateways (Fiat: Stripe, PayPal, LiqPay, Tranzilla, Payoneer; Crypto: Sheepy, Flexify, Payadmit, Mifinity) with Webhook handling and message queues.
- Performing duties of the Tech Lead's deputy / "right hand": making architectural decisions, coordinating development processes across multiple company projects, performing refactoring, deep modernization, and successful migration of large-scale legacy code from Yii2 to modern Laravel 10.
- Executing infrastructure upgrade tasks for legacy projects: safely transferring Yii2 legacy architecture from PHP 7.4 to PHP 8.2 with compatibility fixes.
- Developing flexible user segmentation builders: implementing dynamic filtering systems with support for complex boolean logic (AND / OR operators) for generating custom SQL queries on the fly.
- Full development of financial, product, and SEO analytics modules, as well as turnkey production launch of new commercial tools (goods/services sales modules, GGR and Net Revenue metric calculations).
- Developing complex E-commerce solutions: designing multi-level product filtering systems for high loads, redesigning and adapting catalog interfaces for mobile devices, integrating automotive catalogs and parts selection via TecDoc/VIN API.
- Administering company-level GitLab infrastructure: repository architecture, access and SSH key management, data security, and auto-deployment setup. Writing technical documentation (guidelines, onboarding) and coordinating/mentoring other teams during the integration of developed standards.
- Ensuring system security: data validation at the API and DB levels, implementing role-based access control (RBAC) models, fraud protection (Risk Management), integrating error debug logging into Discord, and automating background tasks (Cron).

Fullstack PHP Developer

08/2022 — 04/2024 (1 yr. 8 mos.)

Solid Solutions , Zaporizhzhia

PHP 7.x/8.x | Yii2 | Laravel | MySQL | REST API | JavaScript / AJAX | Apache | Git

Seoptimer — SEO website audit and analysis

An online platform for automated website auditing, SEO metrics analysis, performance checking, and security assessment. Participated in the development of backend components, REST APIs, and administrative tools.

LocalRanking — Google Business Profile audit platform

A service for analyzing and monitoring Google Maps profiles. The platform provides tools for local SEO auditing, rank tracking, and reviews management. Development of backend/frontend components and REST APIs.

Tuberanker — YouTube channel optimization platform

A SaaS solution for analyzing and promoting content on YouTube (keyword research, competitor analysis). Implementation of backend functions, REST APIs, and administration tools.

Main responsibilities: Development of backend and frontend components, creating REST APIs, setting up console tools, testing, server configuration, and ensuring data security.

Fullstack Yii2 Developer

01/2020 — 07/2022 (2 yrs. 7 mos.)

Derzhgeokadastr , Zhytomyr (Public Sector)

PHP 7.x | Yii2 | MySQL | REST API | JavaScript / AJAX | GIS / Cartography | Graph Algorithms | Nginx & Apache | Git

oda.ztmbk.gov.ua — Geoportal of the Zhytomyr Region Cadastre

An information and analytical GIS platform for maintaining and publishing urban planning cadastre data. Development of the backend, administrative panel, document upload and processing mechanisms, REST API, and integration with mapping services to display geospatial data.

Logistics Service — Transportation Management

A management system for minibuses with automated route planning and work schedules. Implementation of route optimization based on graph theory algorithms, calculation of vehicle load, and dispatch schedules.

Fullstack Web Developer

12/2017 — 12/2019 (2 years)

SeoTM , Zhytomyr

PHP 7.x | Yii2 | MySQL | REST API | JavaScript / AJAX | Node.js | Express.js | Socket.IO | React Native | Git

Locum Planet (UK) — Medical staffing platform

Platform for finding temporary jobs in the medical and dental sectors. Backend development using Yii2, admin panel for job management, and REST API for iOS / Android mobile applications. (Video demo)

Media Device Management System for Public Transport

Platform for centralized management of devices and video content in public transport in real-time. Admin panel built with Yii2, real-time data exchange using Node.js + Socket.IO.

Coffee POS — ERP/POS system for a coffee shop chain

Automation system for retail outlets with mobile POS terminals built on React Native. Management of goods, ingredients, supplies, staff, and sales statistics. Backend and REST API implemented in Yii2. (Instagram)

Warehouse Process Management System for Amazon (USA)

Internal accounting and warehouse operations automation system synchronized with 1C. Backend, admin panel, and REST API developed using Yii2.

Fullstack Web Developer

04/2016 — 11/2017 (1 yr. 8 mos.)

Grapps, Zhytomyr

PHP 7.x | Yii2 | Node.js | Express.js | MySQL | REST API | JavaScript (ES6+) | Socket.IO | Firebase | Git

WalletBoss — Instant messaging platform (Europe)

A mobile messenger for Android and iOS. Real-time interaction built on Node.js and Socket.IO, while the administrative panel and REST API are on Yii2.

TwentyPeaks — Sports social platform for cyclists (Italy)

A platform for tracking mountain routes, recording results, and cyclist rankings. The website, admin panel, and REST API are implemented on Yii2.

Hopsa — Tow truck hailing service with an auction system (Israel)

A tow truck ordering service with push notifications and a pricing auction system among drivers. Development of the website, admin panel, and Web API on Yii2.

Fullstack PHP (CMS) Developer

02/2011 — 02/2016 (5 yrs.)

Origami Design Studio , Zhytomyr

PHP 5.x/7.x | MySQL | JavaScript / jQuery | Drupal | Joomla | WordPress | Magento | Git

Key Responsibilities: Development and maintenance of corporate websites, hotels, residential complexes, and online stores on Drupal, Joomla, WordPress, and Magento CMS. Performance optimization, custom module development, payment system integration, and responsive layout.

Examples of completed projects:

magnum-hotel.com, chayka.org.ua, stvardovska.com.ua, avesauto.ua, avdtrade.com.ua, ostrovit.in.ua, prime-group.com.ua, reputationbook.org, zorrov.com.
